

Mobile and Embedded Computing

Laboratory 4. Devtools

Task I

1. Build a simple interactive app like a Todo list using StatefulWidget and setState
2. Introduce intentional bugs (e.g. out-of-bounds array access) and use the Flutter Devtools to step through the code and fix it. (Make screenshots while doing this, in order to quickly verify the completion of this step).
3. Use the Widget inspector and view the render tree. (Make screenshots while doing this, in order to quickly verify the completion of this step).
